

Average Product Movement Report Guide

The Average Product Movement report displays products that were sold during the specified time frame. It provides you with an average amount sold for the number of days you selected, displays your inventory levels, on hand quantity and on order quantity.

When to create the report

We recommend reviewing this report quarterly.

How to create the report

1. From the SalonBiz/SpaBiz menu bar, click on the Report icon.
2. Double click on Average Product Movement from the report side navigation. You will find it under the Inventory category.
3. Enter the beginning date and ending date for the report (we recommend a 3 month time frame).
4. Enter the number of days in the period ____ (we recommend 7 - this will give you a weekly average).

What it tells you

The report provides you with information on the following areas for the specified time frame:

- **Quantity Sold** - the number of products that were sold during the date range
- **Move Average** - the average number of products that were sold based on the number of days you selected. If you selected 7, this would provide you with a weekly average
- **Min** - the minimum inventory level (lowest amount) that you have set for the product in your system (make sure you set high enough to prevent out of stocks)
- **Max** - the maximum inventory level (most amount) that you have set for the product in your system
- **EOQ** - Economic Order Quantity (reorder amount) the optimal quantity to order for maximizing cost
- **On Hand** - the amount of products you currently have in stock
- **On Order** - the amount of products you have on a purchase order that have not been processed

How it's used

This report is used for calculating an average sales amount for each product. Most owners prefer to keep 1 -3 weeks of inventory stock on hand for each product. By viewing the movement average, you can use that information to set your Min and Max inventory levels.

Average Product Movement for 7 days from 2/1/2008 to 4/30/2008
